Subject: Recent SECY on SOARCA
Attachments: 2008-0029scy.pdf

Dear Members,

Attached is a copy of SECY-08-0029, dated March 4, 2008.

The purpose of this SECY is to obtain Commission approval of the staff-recommended methodology for projecting latent cancer health effects (latent cancer fatalities (LCFs)) in the state-of-the-art reactor consequences analyses (SOARCA). The staff is also seeking approval to proceed with an external peer review of the methods and technical issues associated with assessing offsite health consequences.

Hossein
